Art Unit: 2622

1. The following is an examiner's statement of reasons for allowance: the prior art fails to show or fairly suggest a method and apparatus for reducing periodic intensity variation in a video image having the combinations as claimed, including rotating a plurality of input signals to a video display circuit so that each input signal in the plurality of input signals is repeatedly sequentially shifted, converting each input signal from digital to analog and amplifying each signal and separating each amplified signal to produce a plurality of output signals, each output signal in the plurality of output signals having an amplitude matching a corresponding input signal, as recited in claims 1 and 17. In addition, the prior art fails to show or fairly suggest an apparatus for reducing periodic intensity variation in a video image having the combination claimed, including a plurality of input signals, each input signal in the plurality of input signals representing a column of video image data, a first cross-point switch receiving the plurality of input signals, the first cross-point switch repeatedly sequentially shifting each input signal through an analog circuit portion, the analog circuit portion including sets of components each having a digital to analog converter and an operational amplifier, and a second cross-point switch receiving the amplified output of the analog circuit portion, the second cross-point switch separating each amplified output to produce an output signal, such that each output signal has an amplitude that matches a corresponding input signal, as recited in claim 10. Further, the prior art fails to show or fairly suggest a method of reducing periodic intensity variation in a video image, having the combination

as claimed, including providing a plurality of analog input signals to a video display system, rotating the plurality of analog input signals so that each input signal is repeatedly sequentially shifted to produce a plurality of output signals, and demultiplexing and amplifying the plurality of output signals, wherein each output signal in the plurality of output signals has an amplitude matching a corresponding input signal, as recited in claim 21.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
